**Configuring Sophos**

1. Click on the **Sophos Shield** located by the Time & Date on the Menu bar.

![Sophos Shield](image)

2. Select **Open Preferences**.
3. Click the **Pad Lock** (lower left corner) and enter your administrator password (this is what you used to login to your computer) to make changes to the settings, and then click **OK**.
4. Click the double arrows next to **Show** and select **Disinfection** from the drop down menu.
5. Check the boxes next to **Enable disinfection** and **Action on infected files**.
6. Click **Set**.
7. Click on **System Preferences** in the main menu and then select **Quit System Preferences**.

**What to expect when you’re finished**

1. After your installation is complete, you will have a program running called **Intercheck**. This program runs behind the scenes and continuously checks for viruses. If Intercheck finds a virus it will notify you and will remove the virus automatically.
2. Please use the Sophos updater Icon to update Sophos on your computer on the 16th of every month or when notified by Email.
3. Remember that if Sophos Anti-Virus is not up to date, your virus-protection will be ineffective.
