- 10. Repeat steps 4-8
- 11. Click on **File** and select **Exit**.
- 12. Click on **Yes** to close the Sweep program

What to Expect when your finished

What You Can Expect

- 1. If you are not setup for Internet connectivity the Sophos Remote Updater will not be able to connect to the Hamilton Web site to update Sophos.
- 2. Sophos Anti-virus will be updated <u>everyday</u> at 6am. To update Sophos Antivirus on your computer either use the scheduled task created or manually double click on the Sophos remote updater icon (provided you are connected to the Internet through your Internet Service Provider).
- 3. Sophos Remote Updater will enable you to get Sophos Anti-virus updates using your Network user name and password. If you change your Hamilton network (ESS/SSS) password you will have to make the proper adjustment in Remote updater's configuration to match your current Hamilton network (ESS/SSS) password.
- 4. If you have a laptop and your updates normally take place via the Hamilton Network (\\sss\sophos or \\software\intercheck) Sophos Remote Updater will not change your network update path but will just update Sophos Anti-virus. This is very beneficial because Sophos will stay up to date no matter where you are either on the Hamilton network or in any part of the world.
